SOQ GOALS

It is the intent of this SOQ to provide interested firms/organizations with sufficient information to enable them to prepare and submit statements of qualifications for the project. Based on a rating of the qualified submittals by the evaluation team, a "short list" of the most qualified firms will be developed. Only the top “short list” firms will be invited for interviews and pricing proposals.

SCOPE OF SERVICES

**Background:**
The City of Grand Junction’s strategic plan establishes guiding principles and strategic directives that guide initiatives and community priorities. In keeping with the guiding principles of Partnerships & Intergovernmental Relationships, Fiscal Responsibility, Communication & Engagement, and Leadership and the strategic directive of planning for the future growth in our city, a strategic project was identified to develop a sustainable agriculture program for City ranch properties.

The City owns approximately 15,000 acres in the Whitewater/Kannah Creek area as shown in Attachment 1. The City acquired these properties and associated water rights in separate purchases from Kannah Creek ranchers between 1954 and 1980s. The City leased back property to ranchers and made water rights available for beneficial irrigation use. The City currently leases the Somerville, Anderson, and Click ranches for cattle grazing and Whitewater parcels for dryland grazing.

The former Hallenbeck Ranch (Parcels 2969-251-00-380, 2971-363-00-027, and the portion of Parcel 2971-361-00-001 south of Divide Road) is comprised of about 320 acres as shown in Attachment 2. These parcels are not currently leased. Approximately 120 acres are irrigated as shown in green in Attachment 3. The City has been managing the Hallenbeck Ranch since 2018 and has made improvements to the ditch and irrigation system and removed and treated invasive species (Russian Olives) and noxious weeds.
The distinct features of each parcel are discussed below.

**Parcel 2971-363-00-027**

This parcel consists of 47.7 acres of irrigated land along Purdy Mesa Road that has been historically used as a hay pasture.

A review of soil data available from the USDA/NRCS Web Soil Survey indicate that soils for this parcel are in the Ildefonso-Scholle complex which is characterized as extremely stony with loam at the surface to 3 inches and stony clay loam from 3 to 17 inches as shown in Attachment 4.

Based on these soil characteristics and the availability of irrigation water, this parcel is suitable for growing hay. The land may benefit from perennial grasses such as alfalfa that are deep rooted and contribute nitrogen to the soil. With proper irrigation, the growing season should yield three cutting or two cuttings allowing deer to feed during the winter. The City recently installed gated pipe to improve irrigation delivery to the pasture.

**Parcel 2969-251-00-380**

This parcel consists of 220 acres of land along the east side of Lands End Road. Only a small portion of this site, about 30 acres proximate to the Purdy Mesa No. 2 Reservoir in mid-eastern portion of the site, is irrigated.

A review of soil data available from the USDA/NRCS Web Soil Survey indicate that soils for 43.8% of this parcel, 94 acres to the east of the North Fork of Kannah Creek, are in the Ildefonso-Scholle complex which is characterized as extremely stony with loam at the surface to 3 inches and stony clay loam from 3 to 17 inches as shown in Attachment 5.

The 32 acres along the corridor of the North Fork Creek are classified in Ustifluvents complex with very cobbly sandy loam soils.

The ridge along the eastern corridor of the North Fork of Kannah Creek consists of 55-acres classified as Badland-Deaver-Chipeta complex which is characterized as extremely stony with 25 to 65% slopes. The 35 acres west of the North Fork of Kannah Creek along Lands End Road is classified as Utaline, sodic-Uffens complex and characterized as very stony with slopes ranging from 3 to 25 percent.

This parcel is a rich wildlife corridor. The area is a winter range for deer and elk and an overall range for black bear based on information posted on the Colorado Hunting Atlas available through the Colorado Parks and Wildlife. In addition, due to the presence of bare soils, it is one of the last areas in Mesa County that is habitat for quail. The riparian corridor along the North Fork of Kannah Creek also supports a variety of wildlife.

This parcel would be an attractive wildlife conservation area. The riparian features could possibly be enhanced by diverting irrigation water to the North Fork of Kannah Creek and planting native trees. The dam on Purdy Mesa Reservoir No. 2 requires repair. If managed as a wildlife conservation area, it could support hunting, wildlife viewing, hiking trails, camping, and education.

**Parcel 2971-361-00-001 (south of Divide Road)**

This parcel consists of 52 acres of irrigated land southeast of Lands End Road and Divide Road. It has been historically used as a hay pasture and horse racetrack.
A review of soil data available from the USDA/NRCS Web Soil Survey indicate that soils for 76% of this parcel (40 acres) are in the Ildefonso-Scholle complex which is characterized as extremely stony with loam at the surface to 3 inches and stony clay loam from 3 to 17 inches. The remaining northwest corner of the property is classified as Badland-Deaver-Chipeta complex which is characterized as extremely stony with 25 to 65% slopes (10 acres) and Ustifluvents complex with very cobbly sandy loam soils (3 acres) as shown in Attachment 6.

Given the direct access to Lands End and Divide Roads, this parcel would be suitable for development of event, education, or meeting facilities.

Water and water rights the City may make available to Lessees, if the City in its sole and absolute discretion determines that such water is to be made available to Lessees, may include up to:

- approximately 400 acre-feet of water from the Highline Ditch. This water is usually available from May 1 through June 28 of each year. Available flow rate ranges between 0.1 cubic feet per second ("cfs") and 7.0 cfs, and/or
- approximately 1,200 acre-feet of water from the Juniata Enlarged Ditch. This water is usually available from May 1 through June 15 of each year. Available flow rate ranges between 0.1 cfs to 26.0 cfs, and/or
- approximately 200 acre-feet of reservoir water from the City's Reservoirs. This water is usually available from July 1 through October 15 of each year.

One of the primary objectives of this program is beneficial and responsible use irrigation water.

Potable water is also available to the parcel along Divide Road.
